Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

PT antibodies - useful in detection of anti-CEA antibodies and as vaccine to  
PT stimulate immune response against cancer.  
XX Claim 3; Page 30; 46pp; English.  
XX This sequence represents the complementarity determining region-1 (CDR-1)  
CC of the rW12 heavy chain. This sequence is used in an antibody of the  
CC invention. The antibody of the invention is a chimeric or humanised anti-  
CC idiotype antibodies (cAb and hAb, respectively) or a fragment which  
CC specifically binds to the idiotype region of an anti-carcinoembryonic

antigen (CEA), where: (i) cAb comprises the rW12 light (L) and heavy (H)  
chain variable regions, or silent mutations; and (ii) hAb comprises rW12  
complementarity determining regions (CDR) and humanised framework (FR)  
regions. The hAb is used as a vaccine to stimulate an immune response in  
a patient against cancers expressing CEA. The hAb, can be used to clear  
non-targeted antibody in a method of diagnosis or treatment of a patient  
where a CEA antibody is used as a (pre-)targeting or therapy agent. The  
cAb is used to detect the presence of an antibody that specifically binds  
to CEA in a sample

XX New human monoclonal antibody specifically binding the capsular  
PT polysaccharide glucuronoxylomannan (GXM) of Cryptococcus neoformans,  
PT useful for treating or diagnosing cryptococcal infections.  
XX Example 4; Fig 3; 56pp; English.  
XX This sequence represents a complementarity determining region (CDR) which  
CC was used in the generation of the monoclonal antibody (MAB) of the  
CC invention. The MAB of the invention or its antigen-binding portion  
CC specifically binds the capsular polysaccharide glucuronoxylomannan (GXM)  
CC of Cryptococcus neoformans and comprises a heavy and/or light chain amino  
CC acid sequence having CDR1, CDR2 and CDR3 amino sequences of a human VH 3-  
CC 64 or VH-6-1 gene, or human Vh A27 gene, respectively, with or without a  
CC signal sequence, where the sequence have up to 6 mutations from the  
CC germline gene sequence. The MAB of the invention may be used for  
CC detection, prevention and/or treatment of C. neoformans infection.

PT antibodies - useful in detection of anti-CEA antibodies and as vaccine to  
PT stimulate immune response against cancer.  
XX  
XX Claim 7; Fig 1; 46pp; English.  
XX  
XX This sequence represents a modified version of the rat rW12 heavy chain  
CC variable region, designated KOLWI2VH-1. This sequence is used in an  
CC antibody of the invention. The antibody of the invention is a chimeric or  
CC humanised anti-idiotype antibodies (cAb and hAb, respectively) or a  
CC fragment which specifically binds to the idiotype region of an anti-  
CC carcinoembryonic antigen (CEA), where: (i) cAb comprises the rW12 light  
CC (L) and heavy (H) chain variable regions, or silent mutations; and (ii)  
CC hAb comprises rW12 complementarity determining regions (CDR) and  
CC humanised framework (FR) regions. The hAb is used as a vaccine to  
CC stimulate an immune response in a patient against cancers expressing CEA.

CC The hAb, can be used to clear non-targeted antibody in a method of  
CC diagnosis or treatment of a patient where a CEA antibody is used as a  
CC (pre-)targeting or therapy agent. The cAb is used to detect the presence  
CC of an antibody that specifically binds to CEA in a sample

 XX  
 CC This sequence represents a modified version of the rat rW12 heavy chain  
 CC variable region, designated KOLW12VH-2. This sequence is used in an  
 CC antibody of the invention. The antibody of the invention is a chimeric or  
 CC humanised anti-idiotype antibodies (cAb and hAb, respectively) or a  
 CC fragment which specifically binds to the idiotype region of an anti-  
 CC carcinoembryonic antigen (CEA), where: (i) cAb comprises the rW12 light  
 CC (L) and heavy (H) chain variable regions, or silent mutations; and (ii)  
 CC hAb comprises rW12 complementarity determining regions (CDR) and  
 CC humanised framework (FR) regions. The hAb is used as a vaccine to  
 CC stimulate an immune response in a patient against cancers expressing CEA.  
 CC The hAb, can be used to clear non-targeted antibody in a method of  
 CC diagnosis or treatment of a patient where a CEA antibody is used as a  
 CC (pre-)targeting or therapy agent. The cAb is used to detect the presence  
 CC of an antibody that specifically binds to CEA in a sample

XX
XX Antibodies binding to prostate stem cell antigen inhibit the growth of
PT cancer cells and are used to detect and treat prostate, pancreatic or
PT bladder cancers.
XX
XX Example 21; Fig 60; 127pp; English.
XX
XX The present invention relates to new antibodies that specifically bind a
CC novel prostate stem cell antigen (PSCA), which is widely over-expressed
CC across all stages of prostate cancer. The antibodies of the invention are
CC useful to kill tumour cells expressing PSCA and as PSCA expression is
CC observed in prostate tumour cells and in other human cancers,
CC particularly bladder and pancreatic carcinomas, the antibodies are useful
CC therapeutically to treat these diseases. In particular, monoclonal
CC antibodies can be administered to subjects suffering from PSCA-associated
CC cancers, e.g. prostate, bladder or pancreatic cancer or metastatic
CC prostate, bladder or pancreatic cancer, to inhibit the cancer and prolong
CC the subject's life. The antibodies can be combined with a therapeutic
CC agent in immunoconjugates useful to treat subjects suffering from
CC malignant diseases, characterised by cells having PSCA antigen on the
CC cell surface e.g. cancers, by killing the cells. The antibodies and
CC immunoconjugates may also be included with a carrier in pharmaceutical
CC compositions useful to kill human cells expressing PSCA antigen on the
CC cell surface. The antibodies are also useful diagnostically to detect
CC cancers, especially prostate cancer, to isolate prostate cancer cells
CC e.g. to enable culture growth to evaluate candidate therapeutic
CC compounds, assist in identification of rare genes associated with
CC prostate cancer, and to isolate and purify PSCA and PSCA homologues. The
CC present amino acid sequence represents the mouse heavy chain variable
CC domain region of the PSCA monoclonal antibody 2H9 of the invention

 PT Antibodies against B Lymphocyte Stimulating polypeptides, useful for the  
 PT diagnosis and treatment of cancers and immune disorders.  
 XX  
 PS Claim 1; Page 1564-1565; 3148pp; English.  
 XX  
 CC This invention describes novel antibodies that immunospecifically bind to  
 CC B Lymphocyte Stimulator (Blys) polypeptides. Blys is a member of the  
 CC tumour necrosis factor (TNF) super family and induces B cell  
 CC proliferation and differentiation. The antibodies of the invention have  
 CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory,  
 CC antirheumatic and antiAIDS activity and can be used in vaccines to  
 CC inhibit the expression and activity of Blys. The antibodies bind to Blys  
 CC and so may be used to detect and quantitate the presence of Blys in  
 CC biological samples and may be used in this way to diagnose disease  
 CC associated with aberrant expression of Blys. They may also be  
 CC administered to treat diseases associated with aberrant Blys expression  
 CC and activity such as cancer, immune, and autoimmune disorders and  
 CC diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis,  
 CC immunodeficiency (e.g. common variable immunodeficiency (CVID) and  
 CC acquired immunodeficiency syndrome (AIDS)). ABP4390-ABP47228 represent  
 CC the antibodies and fragments of the antibodies described in the method of  
 CC the invention

 XX Novel antibody that immunospecifically binds to a B lymphocyte stimulator  
 PT (Blys), useful for detecting and treating diseases or disorders e.g.  
 PT rheumatoid arthritis, asthma and leukemia.  
 XX  
 PS Example 1; SEQ ID NO 974; 394pp; English.  
 XX  
 CC This invention relates to novel antibodies that immunospecifically bind  
 CC to B lymphocyte stimulator (Blys). The Blys gene has been mapped to  
 CC chromosome 13q34 and encodes a protein that is a member of the tumour  
 CC necrosis factor superfamily and induces both in vivo and in vitro B cell  
 CC proliferation and differentiation. Specifically, it refers to single  
 CC chain antibody molecules (scFvs) derived, preferably, from the variable  
 CC heavy CDR3 region that immunospecifically bind to a polypeptide, or  
 CC fragment thereof, of either human, murine, rat or monkey Blys. The  
 CC present invention refers to the use of such antibodies in various methods  
 CC for the detection, diagnosis and prognosis of diseases related to the  
 CC aberrant expression or inappropriate function of Blys or its receptor. As  
 CC such, these compositions are useful for identifying immune disorders  
 CC including myasthenia gravis and multiple sclerosis, inflammatory  
 CC disorders e.g. asthma and rheumatoid arthritis, infectious diseases such  
 CC as AIDS and proliferative disorders including leukaemia, carcinoma and  
 CC lymphoma. Accordingly, they can be described as exhibiting various  
 CC activities such as antirheumatic, antiarthritic, neuroprotective,  
 CC antiinflammatory, antiasthmatic, antiallergic and cytostatic. This  
 CC polypeptide sequence is a single chain antibody that binds Blys of the  
 CC invention. NOTE: The sequence data for this patent did not form part of  
 CC the printed specification, but was obtained in electronic format  
 CC directly from WIPO at ftp.wipo.int/pub/published pct\_sequences.

XX Propionibacterium acnes polypeptides and nucleic acids useful for  
PT vaccinating against and diagnosing infections, especially useful for  
PT treating acne vulgaris.

XX Example 1; SEQ ID NO 23999; 1069pp; English.

XX Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic  
CC polypeptides. The proteins and their associated DNA sequences are used in  
CC the treatment, prevention and diagnosis of medical conditions caused by  
CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne,  
CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.  
CC P. acnes is also involved in infections of bone, joints and the central  
CC nervous system, however it is particularly involved in the inflammatory  
CC lesions associated with acne vulgaris. A method for detecting the  
CC presence or absence of P. acnes in a patient comprises contacting a  
CC sample with a binding agent that binds to the proteins of the invention  
CC and determining the amount of bound protein in the sample. The  
CC polypeptides may be used as antigens in the production of antibodies  
CC specific for P. acnes proteins. These antibodies can be used to  
CC downregulate expression and activity of P. acnes polypeptides and  
CC therefore treat P. acnes infections. The antibodies may also be used as  
CC diagnostic agents for determining P. acnes presence, for example, by  
CC enzyme linked immunosorbent assay (ELISA). Note: The sequence data for  
CC this patent did not form part of the printed specification, but was  
CC obtained in electronic format directly from WIPO at

XX New Propionibacterium acnes polypeptides and polynucleotides encoding the  
PT polypeptide, useful for diagnosing, preventing or treating acne vulgaris,  
PT or for stimulating an immune response specific for a P. acnes protein.  
XX  
PS Example 1; SEQ ID NO 23999; 1481pp; English.

XX The invention relates to an isolated polynucleotide (ACF64435-ACF64733)  
CC encoding a Propionibacterium acnes protein. The invention also relates to  
CC polypeptides encoded by the polynucleotides (ABMS5624-ABMS64536) and to  
CC immunogenic fragments of P. acnes polypeptides. The invention  
CC additionally encompasses expression vectors and host cells comprising a  
CC polynucleotide of the invention; antibodies against polypeptides of the  
CC invention; fusion proteins comprising a polypeptide of the invention; a  
CC method for stimulating an immune response specific for a P. acnes  
CC polypeptide and an isolated T cell population comprising T cells prepared  
CC via this method; a vaccine composition (comprising P. acnes polypeptides,  
CC polynucleotides, antibodies, fusion proteins, T cell populations, or  
CC antigen-presenting cells that express the polypeptide); a method and kit  
CC for detecting or determining the presence or absence of P. acnes in a  
CC patient; and a method for inhibiting the development of P. acnes in a  
CC patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion  
CC proteins, T cell populations or antigen-presenting cells that express the  
CC polypeptides are useful for diagnosing, preventing or treating acne  
CC vulgaris, or for stimulating an immune response specific for a P. acnes  
CC protein. The polynucleotides can also be used as probes or primers for  
CC nucleic acid hybridisation. The vaccine composition is useful for the  
CC stimulation of an immune response against P. acnes, or for treating acne,  
CC and the kit is useful for performing a diagnostic assay. The present

CC sequence represents a polypeptide predicted to be encoded by an ORF (open  
CC reading frame) contained within the P. acnes polynucleotides of the  
CC invention. Note: The sequence data for this patent did not form part of  
CC the printed specification, but was obtained in electronic format directly  
CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

XX New antisense nucleic acids, useful for identifying proteins or screening  
PT for homologous nucleic acids required for cellular proliferation to  
PT isolate candidate molecules for rational drug discovery programs.  
XX  
PS Claim 25; SEQ ID NO 63299; 1766pp; English.

XX The invention relates to an isolated nucleic acid comprising any one of  
CC the 6213 antisense sequences given in the specification where expression  
CC of the nucleic acid inhibits proliferation of a cell. Also included are:  
CC (1) a vector comprising a promoter operably linked to the nucleic acid  
CC encoding a polypeptide whose expression is inhibited by the antisense  
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated  
CC polypeptide or its fragment whose expression is inhibited by the  
CC antisense nucleic acid; (4) an antibody capable of specifically binding  
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular  
CC proliferation or the activity of a gene in an operon required for  
CC proliferation; (7) identifying a compound that influences the activity of  
CC the gene product or that has an activity against a biological pathway  
CC required for proliferation, or that inhibits cellular proliferation; (8)  
CC identifying a gene required for cellular proliferation or the biological  
CC pathway in which a proliferation-required gene or its gene product lies  
CC or a gene on which the test compound that inhibits proliferation of an

CC organism acts; (9) manufacturing an antibiotic; (10) profiling a  
CC compound's activity; (11) a culture comprising strains in which the gene  
CC product is overexpressed or underexpressed; (12) determining the extent  
CC to which each of the strains is present in a culture or collection of  
CC strains; or (13) identifying the target of a compound that inhibits the  
CC proliferation of an organism. The antisense nucleic acids are useful for  
CC identifying proteins or screening for homologous nucleic acids required  
CC for cellular proliferation to isolate candidate molecules for rational  
CC drug discovery programs, or for screening homologous nucleic acids  
CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,  
CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of  
CC the target prokaryotic essential genes. Note: The sequence data for this  
CC patent did not form part of the printed specification, but was obtained  
CC in electronic format directly from WIPO at

XX Constructing strains for identifying gene products as effective targets  
PT for therapeutic intervention, by inactivating in the strain one allele of  
PT a gene and placing other allele of the gene under conditional expression.

XX Claim 44; SEQ ID NO 7816; 167pp + Sequence Listing; English.

XX The invention relates to constructing (M1) a strain of diploid fungal  
CC cells in which both alleles of a gene are modified, comprising modifying  
CC one allele by insertion or replacement by a cassette having an  
CC expressible selectable marker and modifying other allele by  
CC recombination, of a promoter replacement fragment with a heterologous  
CC promoter, so that expression of the second allele is regulated by the  
CC promoter. (M1) is useful for constructing a strain of diploid fungal  
CC cells in which both alleles of a gene are modified. The diploid fungal  
CC cells having both alleles modified are useful for identifying a gene that  
CC is essential to the survival or growth of a fungus, a gene that  
CC contributes to the virulence and/or pathogenicity of a fungus, a gene  
CC that contributes to the resistance of a diploid fungus to an antifungal  
CC agent, an antifungal agent that inhibits the growth of a diploid fungus  
CC and for identifying a therapeutic agent for treatment of a mammalian  
CC disease. (M1) is useful for identifying a compound which modulates the  
CC activity of a gene product, preferably enzymatic activity, carbon  
CC compound catabolism, biosynthetic, transporter, transcriptional,  
CC translational, signal transduction, DNA replication and cell division  
CC activity. The method is useful for identifying a compound having the  
CC ability to inhibit growth or proliferation of *C. albicans* cells and for  
CC treating infection by *C. albicans*. The present sequence is that of an  
CC essential Candida albicans protein used in the method of the invention.  
CC Note: The sequence data for this patent is not represented in the printed  
CC specification but is based on sequence information supplied to Derwent by  
CC the European Patent Office

XX useful e.g. as therapeutic antimicrobials and agricultural pesticides.  
XX Claim 2; SEQ ID NO 1333; 1205pp; French.

CC The invention relates to the isolation of genes and their encoded  
CC proteins from Photorhabdus luminescens. The isolated sequences are  
CC sources of probes and primers for detecting the genome of *P. luminescens*  
CC and related species; to study polymorphisms; for gene analysis and for  
CC detection/amplification of the genes. Antibodies (Ab) raised against the  
CC polypeptides encoded by the genes are used for detection/identification  
CC of *P. luminescens*, e.g. in foods. The genes, proteins, Ab and cells that  
CC carry a gene-containing vector are used to select compounds that  
CC modulate, regulate, induce or inhibit expression of the genes in plants,  
CC animals or microorganisms other than *P. luminescens* and are able to alter  
CC response or sensitivity to toxins and antibiotics produced by *P.*  
CC *luminescens*. Cells transformed to express the genes are useful for  
CC recombinant production of the proteins, particularly toxins and  
CC antibacterials useful as insecticides, bactericides and fungicides. The  
CC genes, proteins, vectors containing the genes and Ab are also useful  
CC therapeutically to treat microbial infection by bacteria or fungi that

are sensitive to P. luminescens-encoded toxins or antibiotics) and as biopesticides. Other uses of the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P. luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens proteins

XX New isolated nucleic acid detection reagent for detecting 1000 or more  
 PT genes from Drosophila and for elucidating cell signalling and cell-cell  
 PT interactions.

XX Disclosure; SEQ ID NO 42837; 21pp + Sequence Listing; English.

XX The invention relates to an isolated nucleic acid detection reagent  
 CC capable of detecting 1000 or more genes from Drosophila. The invention is  
 CC useful in developmental biology and in elucidating cell signalling and  
 CC cell-cell interactions in higher eukaryotes for the development of  
 CC insecticides, therapeutics and pharmaceutical drugs. The invention  
 CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA  
 CC sequences (ABL01840-ABL16175) and the encoded proteins (ABE57737-  
 CC ABE72072). The sequence data for this patent did not form part of the  
 CC printed specification, but was obtained in electronic format directly  
 CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

XX PT New nucleic acid encoding a branching enzyme, useful for in vitro

XX PT synthesis of branched glucans and to prepare transgenic plants producing

XX PT modified starch.

XX PS Claim 1a; Page 96-99; 115pp; German.

XX CC This invention describes a novel nucleic acid (I) isolated from Neisseria

XX CC which encodes a branching enzyme (II). (I) is used for recombinant

XX CC production of (II) subsequently used in the in vitro production of alpha-

XX CC 1,6-branched alpha-1,4-glucans. It is also used to prepare transgenic

XX CC plants that produce starches with modified properties. (III) are used as

XX CC binders for tablets, carriers for pharmaceuticals, flavors and perfumes

XX CC and powdered additives, packaging materials, ultra-violet light adsorbers

XX CC in sunscreens and also for any of the usual applications of starch in

XX CC foods, papermaking, as textile size, in soil stabilization, as wetting

XX CC agent for agricultural chemicals, as polymer additives etc. Fragments of

XX CC (I) are useful as PCR primers and antisense molecules or ribozymes for

XX CC inhibiting expression of (II), and the regulatory region of (II) can be

XX CC used to control expression of heterologous sequences in host cells. (I)

XX CC provides an inexpensive method for producing alpha-1,6-branched alpha-1,4

XX CC -glucans (III), producing products that can be tailored for particular

XX CC applications, particularly by controlling the degree of branching. Starch

XX CC from transgenic plants has increased gel strength; reduced phosphate

XX CC content; reduced peak viscosity; lower pasting temperature and granule

XX CC size and/or altered sidechain distribution. This sequence represents an

XX CC alpha-1,6-branched alpha-1,4-glucan isolated from Neisseria denitrificans

XX CC which is described in the method of the invention

 PT New transgenic mouse comprising a disruption in a CLCN7 (chloride ion  
 PT channel) gene useful as models for diseases, disorders or conditions  
 PT associated with phenotypes relating to a disruption in a CLCN7 gene.  
 XX  
 PS Disclosure; Fig 2; 65pp; English.  
 XX  
 CC This sequence shows the murine CLCN7 (chloride ion channel) protein. The  
 CC CLCN7 cDNA sequence was disrupted in the transgenic mouse of the  
 CC invention in which there is no native expression of endogenous CLCN7  
 CC gene. Mice having disruptions in the CLCN7 gene exhibit musculoskeletal  
 CC abnormalities, and may alternatively or additionally exhibit an immune  
 CC system abnormality. The transgenic mice are useful as models for  
 CC diseases, disorders or conditions associated with phenotypes relating to  
 CC a disruption in a CLCN7 gene; in the identification of drugs,  
 CC pharmaceuticals, therapies and interventions that may be effective in  
 CC treating a disease or other phenotypic characteristic of the animal; in  
 CC the identification of compounds capable of ameliorating disease symptoms;  
 CC and in testing and developing new treatments relating to behavioural  
 CC phenotypes

XX Identifying pain-regulating compounds, useful for treating chronic pain  
PT and for diagnosis, by measuring binding of compounds to specific peptides  
PT and proteins.  
XX  
XX Claim 1; Fig 40; 213pp; German.  
  
XX The invention relates to identifying pain-regulating substances (A)  
CC comprises (i) incubating a test substance with a cell (or preparation  
CC from it) that has synthesised a peptide or protein (B) and (ii) measuring  
CC either binding of the test substance to (B) or some functional parameter  
CC that is altered by this binding. The method is useful for identifying  
CC pain-regulating substances (A) with analgesic activity. (A) along with  
CC nucleic acid (ABL88411-ABL88441) that encode proteins (B, ABB85006-  
CC ABB85037) that interact with (A); (B); vectors containing the nucleic  
CC acid; antibodies against (B); cells that express (B) and agents that bind  
CC to (B), are all useful for treating pain, particularly chronic pain,  
CC including use in gene therapy. The same materials can also be used for  
CC diagnosis, e.g. of neurological and neurodegenerative diseases. The  
CC present sequence is that of a polypeptide of the invention

CC a cell that expresses CLC-7 with a test compound and detecting any  
CC alteration in channel activity. Compounds of the invention decrease the  
CC differentiation of osteoclast precursor cells and the activity of mature  
CC osteoclasts, so reducing bone resorption. Compounds identified by the  
CC method are useful for treatment and prevention of osteoporosis, and also  
CC for the diagnosis of osteoporosis and other conditions associated with  
CC CLC-7, in humans or other animals. The current sequence represents the  
CC human CLC-7 amino acid sequence.

 PT Identifying a mitochondrial target for drug screening assays and for  
 PT treating diseases associated with altered mitochondrial function,  
 PT comprises detecting a modified polypeptide in a sample and correlating  
 PT with the disease.  
 XX  
 PS Claim 1; SEQ ID NO 1815; 180pp; English.  
 XX  
 CC This invention relates to novel mitochondrial targets that can be used  
 CC for therapeutic intervention in treating a disease associated with  
 CC altered mitochondrial function. Specifically, it refers to a method for  
 CC identifying proteins of the human heart mitochondrial proteome that are  
 CC useful for drug screening assays, as well as therapeutic targets. The  
 CC present invention describes a method for identifying such proteins that  
 CC can be used in the treatment of various diseases associated with altered  
 CC mitochondrial function including diabetes mellitus, Huntington's disease,  
 CC osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial  
 CC encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy  
 CC ragged red fibre syndrome (MERRF) or cancer. Accordingly, these  
 CC compositions have neuroprotective, nootropic, antidiabetic,  
 CC anticonvulsant, antiarthritic, osteopathic, ophthalmological and  
 CC cytostatic activities. This polypeptide sequence is a human heart  
 CC mitochondrial protein of the invention.

 PT Early detection of soft tissue sarcoma comprises determining expression  
 PT of a gene in a first soft tissue sample and a normal soft tissue sample  
 PT and comparing the gene expression, also useful in treating soft tissue  
 PT sarcoma.

Example 2; SEQ ID NO 1059; 210pp; English.

The invention relates to a novel method for detecting soft tissue sarcoma  
 which comprises obtaining a first soft tissue sample from an individual  
 and a normal soft tissue sample from the same or different individual,  
 determining the expression of a gene in both samples and comparing the  
 expression of the gene in both soft tissue samples, where a higher level  
 of protein expression in the first soft tissue sample indicates the  
 presence of soft tissue sarcoma. The method of the invention has  
 cytostatic applications and may be useful for detecting soft tissue  
 sarcoma, possibly via gene therapy or vaccine production. The nucleic  
 acid sequences may be useful in diagnostic and screening applications.  
 The current sequence is that of a human soft tissue sarcoma-upregulated  
 protein of the invention. The current sequence is not shown within the  
 CC specification per se but was submitted in CD format by the inventor.

XX  
PS Claim 20; SEQ ID NO 49833; 103pp; English.  
XX  
CC The invention relates to isolated polynucleotide (I) and polypeptide (II)  
CC sequences. (I) is useful as hybridisation probes, polymerase chain  
CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,  
CC and in recombinant production of (II). The polynucleotides are also used  
CC in diagnostics as expressed sequence tags for identifying expressed  
CC genes. (I) is useful in gene therapy techniques to restore normal  
CC activity of (II) or to treat disease states involving (II). (II) is  
CC useful for generating antibodies against it, detecting or quantitating a  
CC polypeptide in tissue, as molecular weight markers and as a food  
CC supplement. (II) and its binding partners are useful in medical imaging  
CC of sites expressing (II). (I) and (II) are useful for treating disorders  
CC involving aberrant protein expression or biological activity. The  
CC polypeptide and polynucleotide sequences have applications in  
CC diagnostics, forensics, gene mapping, identification of mutations  
CC responsible for genetic disorders or other traits to assess biodiversity  
CC and to produce other types of data and products dependent on DNA and  
CC amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic  
CC amino acid sequences of the invention. Note: The sequence data for this  
CC patent did not appear in the printed specification, but was obtained in  
CC electronic format directly from WIPO at

New diagnostic and therapeutic polynucleotides and polypeptides, useful  
in diagnosing a condition, disease or disorder associated with human  
molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or  
in gene mapping.  
Claim 27; Page; 190pp; English.  
The invention relates to novel diagnostic and therapeutic polynucleotides  
selected from one of the 2722 sequences defined in the specification. A  
polynucleotide of the invention may have a use in gene therapy. The human  
diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be  
used to diagnose a particular condition, disease or disorder associated  
with human molecules, e.g. cell proliferative disorders,  
autoimmune/inflammatory disorder, developmental disorder, endocrine  
disorder, neurological disorders, gastrointestinal disorders, or  
infections caused by virus, bacteria, fungi or parasite. The dithp  
molecules may also be used in genetic mapping, in identifying individuals  
from minute biological samples, in detecting single nucleotide  
polymorphisms, as molecular weight markers, and for somatic or germline  
gene therapy. The present sequence represents a dithp protein of the  
invention. Note: The sequence data for this patent is not represented in

 PT New diagnostic and therapeutic polynucleotides and polypeptides, useful  
 PT in diagnosing a condition, disease or disorder associated with human  
 PT molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or  
 PT in gene mapping.  
 XX  
 PS Claim 27; Page; 190pp; English.  
 XX  
 CC The invention relates to novel diagnostic and therapeutic polynucleotides  
 CC selected from one of the 2722 sequences defined in the specification. A  
 CC polynucleotide of the invention may have a use in gene therapy. The human  
 CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be  
 CC used to diagnose a particular condition, disease or disorder associated  
 CC with human molecules, e.g. cell proliferative disorders,  
 CC autoimmune/inflammatory disorders, developmental disorder, endocrine  
 CC disorder, neurological disorders, gastrointestinal disorders, or  
 CC infections caused by virus, bacteria, fungi or parasite. The dithp  
 CC molecules may also be used in genetic mapping, in identifying individuals  
 CC from minute biological samples, in detecting single nucleotide  
 CC polymorphisms, as molecular weight markers, and for somatic or germline  
 CC gene therapy. The present sequence represents a dithp protein of the  
 CC invention. Note: The sequence data for this patent is not represented in  
 CC the printed specification, but was obtained in electronic format directly  
 CC from WIPO at [www.wipo.int/pct/en/sequences/listing.htm](http://www.wipo.int/pct/en/sequences/listing.htm)

 PT Human proteins and DNA encoding sequences useful for preventing, treating  
 PT or ameliorating a medical condition in a mammalian subject e.g. arthritis  
 PT and cancer.  
 XX  
 PS Claim 20; Page 263-264; 1963pp; English.  
 XX  
 CC Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and  
 CC sequences ABA08225-ABA09574 represent nucleic acids encoding them. The  
 CC invention also relates to vectors and recombinant host cells comprising a  
 CC nucleotide of the invention, methods of producing the novel polypeptides,  
 CC antibodies against the polypeptides, methods of detecting the nucleotides  
 CC or polypeptides in a sample, and methods of identifying compounds which  
 CC bind to polypeptides of the invention. Although novel, many of the  
 CC polypeptides of the invention have homology to known proteins, and hence  
 CC giving an insight into their probable biological activities, and hence  
 CC potential therapeutic applications. The polypeptides of the invention may  
 CC have various activities, including cytokine, cell proliferation or cell  
 CC differentiation activities; stem cell growth factor activity;  
 CC haematopoiesis regulatory activity; tissue growth activity;  
 CC immunomodulatory activity; activin- or inhibin-related activities;  
 CC chemotactic or chemokinetic activities; haemostatic, thrombotic or  
 CC thrombolytic activities; receptor or ligand activities; or may be  
 CC involved in oncogenesis; cancer cell proliferation or metastasis.  
 CC Depending on their biological activities, polypeptides and nucleotides of  
 CC the invention are useful for preventing, treating or ameliorating medical  
 CC conditions, e.g., by protein or gene therapy. Such conditions include  
 CC cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell  
 CC disorders), chronic inflammatory conditions (e.g., asthma or arthritis),  
 CC proliferative retinopathy, atherosclerosis, coronary heart disease,  
 CC arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal  
 CC vascular growth. Polypeptides involved with tissue regeneration and  
 CC repair (or nucleic acids encoding them) may be used to promote wound  
 CC healing (e.g., of burns, incisions and ulcers), while those with  
 CC immunomodulatory activities may be used in the treatment of viral,  
 CC bacterial and fungal infections in addition to immune disorders.  
 CC Polypeptides with growth factor activity may be used in cell cultures to  
 CC promote cell growth. For example, such polypeptides may be used to  
 CC manipulate stem cells in culture to give rise to neuroepithelial cells  
 CC that can be used to augment or replace cells damaged by illness,  
 CC autoimmune disease or accidental damage. The polypeptides and nucleotides  
 CC may also be used in the diagnosis of the above conditions, and in drug  
 CC screening techniques. The present sequence represents a novel human  
 CC polypeptide of the invention

 XX New isolated polynucleotide and encoded polypeptides, useful in  
 PT diagnostics, forensics, gene mapping, identification of mutations  
 PT responsible for genetic disorders or other traits and to assess  
 PT biodiversity.  
 XX Claim 20; SEQ ID NO 49834; 103pp; English.  
 PS The invention relates to isolated polynucleotide (I) and polypeptide (II)  
 CC sequences. (I) is useful as hybridisation probes, polymerase chain  
 CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,  
 CC and in recombinant production of (II). The polynucleotides are also used  
 CC in diagnostics as expressed sequence tags for identifying expressed  
 CC genes. (I) is useful in gene therapy techniques to restore normal  
 CC activity of (II) or to treat disease states involving (II). (II) is  
 CC useful for generating antibodies against it, detecting or quantitating a  
 CC polypeptide in tissue, as molecular weight markers and as a food  
 CC supplement. (II) and its binding partners are useful in medical imaging  
 CC of sites expressing (II). (I) and (II) are useful for treating disorders  
 CC involving aberrant protein expression or biological activities in  
 CC polypeptide and polynucleotide sequences have application of mutations  
 CC diagnostics, forensics, gene mapping, identification of mutations  
 CC and to produce other types of data and products dependent on DNA and  
 CC amino acid sequences. ABG0010-ABG30377 represent novel human diagnostic  
 CC amino acid sequences of the invention. Note: The sequence data for this  
 CC patent did not appear in the printed specification, but was obtained in  
 CC electronic format directly from WIPO at  
 CC ftp.wipo.int/pub/published\_pct\_sequences

 PT probiotic bacteria, or for preventing or treating enteric infections or  
 PT cancer.  
 XX Claim 6; SEQ ID NO 150; 462pp; English.  
 PS The invention relates to novel isolated nucleic acid molecule encoding  
 CC fructo-oligosaccharide (FOS) utilization compounds. The invention further  
 CC comprises a vector comprising the nucleic acid; a host cell containing  
 CC the vector; an isolated polypeptide encoded by the nucleic acid; an  
 CC antibody that selectively binds the polypeptide; a method for producing  
 CC the polypeptide from a culture of the host cell; detecting the  
 CC bacterium to metabolize fructo-oligosaccharide (FOS) and/or other complex  
 CC carbohydrates; modifying the ability of a bacterium to colonize the  
 CC gastrointestinal tract of a host; stimulating the growth of beneficial  
 CC commensals in the gastrointestinal tract of a mammal; a Lactobacillus  
 CC bacterial strain with a modified ability to colonize the gastrointestinal  
 CC tract of a host compared to a wild-type Lactobacillus bacterial strain,  
 CC where the modified ability is due to overexpression of one or more  
 CC heterologous FOS-related polypeptides cited above; a culture comprising  
 CC the Lactobacillus bacterial strain; and an isolated nucleic acid comprising  
 CC regulatory element comprising a nucleotide sequence selected from: SEQ ID  
 CC NO: 173, 174, 175, 353 or 354; a biologically active sequence comprising  
 CC at least 50 consecutive residues of SEQ ID NO: 173, 353 or 354; a  
 CC nucleotide sequence that hybridizes to the complement of the FOS isolated  
 CC nucleic acid under stringent conditions; or a sequence with at least 90%  
 CC identity to the FOS isolated nucleic acid which has biological activity  
 CC as a regulatory control element. The FOS isolated nucleic acid has  
 CC antimicrobial, anti-diarrheic, cytostatic, gastrointestinal-gen., and  
 CC immunostimulant activities. The nucleic acids are useful for imparting  
 CC better FOS-utilizing capacity to probiotic bacteria, including  
 CC Lactobacillus. The bacteria or purified polypeptides may be used as food  
 CC supplements in preventing or treating enteric infections, diarrheal  
 CC diseases or cancer, and for stimulating the immune system. The bacteria  
 CC are useful in the production of fermented milk products. This sequence

Title: US-10-808-538-1

Perfect score: 34

Sequence: 1 NYWMT 5

Scoring table: BLOSUM62

Gapop 10.0 , Gapext 0.5

Searched: 2166443 seqs, 705528306 residues

Total number of hits satisfying chosen parameters: 2166443

Minimum DB seq length: 0

Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0%

Maximum Match 100%

Listing first 1000 summaries

Database : UniProt 05.80.\*

1: uniprot\_sprot.\*

2: uniprot\_trembl.\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

#### SUMMARIES

Result No.	Score	Query Match	Length	ID	Description
1	34	100.0	209	Q7XB55_9VIRI	Q7xb55 closterium

CC -!- FUNCTION: Catalyzes the formation of the alpha-1,6-glucosidic
CC linkages in glycogen by scission of a 1,4-alpha-linked
CC oligosaccharide from growing alpha-1,4-glucan chains and the
CC subsequent attachment of the oligosaccharide to the alpha-1,6
CC position (By similarity).
CC -!- CATALYTIC ACTIVITY: Transfers a segment of a 1,4-alpha-D-glucan
CC chain to a primary hydroxy group in a similar glucan chain.
CC -!- PATHWAY: Glycogen biosynthesis; third step.
CC -!- SUBUNIT: Monomer (By similarity).
CC -!- SIMILARITY: Belongs to the glycosyl hydrolase 13 family.

; Patent No. 6703491
; GENERAL INFORMATION:
; APPLICANT: Homburger et al.
; TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
; FILE REFERENCE: File Reference: 7326-094
; CURRENT APPLICATION NUMBER: US/09/270,767
; CURRENT FILING DATE: 1999-03-17
; NUMBER OF SEQ ID NOS: 62517
; SOFTWARE: PatentIn Ver. 2.0
; SEQ ID NO 52158
; LENGTH: 247
; TYPE: PRT
; ORGANISM: Drosophila melanogaster
; FEATURE:
```

OTHER INFORMATION: Xaa means any amino acid  
US-09-270-767-52158

Query Match 88.2%; Score 30; DB 2; Length 247;  
Best Local Similarity 80.0%; Pred. No. 5.3e+02;  
Matches 4; Conservative 1; Mismatches 0; Indels 0; Gaps 0;

; Sequence 15, Application US/08816105A
; Patent No. 5989882
; GENERAL INFORMATION:
; APPLICANT: Crueger, Anneliese; Dellweg, Hans-Georg; Lenz,
; APPLICANT: Jurgens, Schroder, Werner; Pape, Hermann;
; APPLICANT: Goeke, Klaus; Schaper, Beate; Hemker, Michael;
; APPLICANT: Piepersberg, Wolfgang; Distler, Jurgens;
; APPLICANT: Stratmann, Ansgar
; TITLE OF INVENTION: PROCESSES FOR PREPARING ACARVOSYL
; TITLE OF INVENTION: TRANSFERASE AND FOR USING IT IN THE
; TITLE OF INVENTION: CONVERSION OF ACARBOSE HOMOLOGUES
; TITLE OF INVENTION: INTO ACARBOSE, FOR THE PREPARATION
; TITLE OF INVENTION: OF ACARBOSE HOMOLOGUES
; NUMBER OF SEQUENCES: 16
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: Sprung Kramer Schaefer & Briscoe
; STREET: 660 White Plains Road
; CITY: Tarrytown
```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 XX  
 CC This sequence represents the complementarity determining region-2 (CDR-2)  
 CC of the rW12 heavy chain. This sequence is used in an antibody of the  
 CC invention. The antibody of the invention is a chimeric or humanised anti-  
 CC idiotype antibodies (cab and hab, respectively) or a fragment which  
 CC specifically binds to the idiotype region of an anti-carcinoembryonic

CC antigen (CEA), where: (i) cab comprises the rW12 light (L) and heavy (H)  
 CC chain variable regions, or silent mutations; and (ii) hab comprises rW12  
 CC complementarity determining regions (CDR) and humanised framework (FR)  
 CC regions. The hab is used as a vaccine to stimulate an immune response in  
 CC a patient against cancers expressing CEA. The hab, can be used to clear  
 CC non-targeted antibody in a method of diagnosis or treatment of a patient  
 CC where a CEA antibody is used as a (pre-)targeting or therapy agent. The  
 CC cab is used to detect the presence of an antibody that specifically binds  
 CC to CEA in a sample

XX CC This sequence represents a modified version of the rat rW12 heavy chain
XX CC variable region, designated KOLWI2VH-2. This sequence is used in an
XX CC antibody of the invention. The antibody of the invention is a chimeric or
XX CC humanised anti-idiotypic antibodies (cAb and hAb, respectively) or a
XX CC fragment which specifically binds to the idiotype region of an anti-
XX CC carcinoembryonic antigen (CEA), where: (i) cAb comprises the rW12 light
XX CC (L) and heavy (H) chain variable regions, or silent mutations; and (ii)
XX CC hAb comprises rW12 complementarity determining regions (CDR) and
XX CC humanised framework (FR) regions. The hAb is used as a vaccine to
XX CC stimulate an immune response in a patient against cancers expressing CEA.
XX CC The hAb can be used to clear non-targeted antibody in a method of
XX CC diagnosis or treatment of a patient where a CEA antibody is used as a
XX CC (pre-)targeting or therapy agent. The cAb is used to detect the presence
XX CC of an antibody that specifically binds to CEA in a sample

XX Recovering a polypeptide that unfolds reversibly from a repertoire of  
PT polypeptides for treating e.g., cancer, by unfolding a portion of the  
PT displayed polypeptides and refolding a portion of the unfolded  
PT polypeptides.  
XX Disclosure; SEQ ID NO 147; 222pp; English.  
XX The invention describes a method of recovering a polypeptide that unfolds  
XX reversibly from a repertoire of polypeptides that unfolds reversibly and  
CC has a common selectable characteristic that distinguishes folded  
CC polypeptides from unfolded or misfolded polypeptides. The method  
CC comprises: providing a polypeptide display system comprising the  
CC repertoire of displayed polypeptides; unfolding at least a portion of the  
CC displayed polypeptides; refolding at least a portion of the unfolded  
CC polypeptides; and recovering at least one polypeptide that unfolds  
CC reversibly and has the selectable characteristic from the refolded  
CC portion. The method is useful in recovering a polypeptide that unfolds  
CC reversibly from a repertoire of polypeptides that unfolds reversibly. The  
CC library or repertoire is useful for selecting a polypeptide comprising an  
CC antibody variable domain that unfolds reversibly or a polypeptide that  
CC refolds reversibly and comprising an antibody format. The polypeptide is  
CC useful in the manufacture of a medicament for diagnosing, treating or  
CC preventing a disease or medical condition mediated by a cytokine,  
CC cytokine receptor, enzyme, enzyme co-factor or DNA binding protein, such  
CC as an inflammatory state, allergic hypersensitivity, cancer, bacterial or  
CC viral infection or an autoimmune disorder, e.g., asthma, psoriasis, Type  
CC I diabetes, multiple sclerosis, rheumatoid arthritis, systemic lupus  
CC erythematosus, Crohn's disease, myasthenia gravis, leukemia or solid  
CC tumor. This is the amino acid sequence of complementarity determining  
CC region (CDR) used in a polypeptide display system for selection of  
CC reversibly folding peptides.

XX PT Antibodies against B Lymphocyte Stimulating polypeptides, useful for the  
 PT diagnosis and treatment of cancers and immune disorders.  
 XX Claim 1; Page 2731-2732; 3148pp; English.

XX CC This invention describes novel antibodies that immunospecifically bind to  
 CC B Lymphocyte Stimulator (BlyS) polypeptides. BlyS is a member of the  
 CC tumour necrosis factor (TNF) super family and induces B cell

CC proliferation and differentiation. The antibodies of the invention have  
 CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory,  
 CC antirheumatic and antiAIDS activity and can be used in vaccines to  
 CC inhibit the expression and activity of Blys. The antibodies bind to Blys  
 CC and so may be used to detect and quantitate the presence of Blys in  
 CC biological samples and may be used in this way to diagnose disease  
 CC associated with aberrant expression of Blys. They may also be  
 CC administered to treat diseases associated with aberrant Blys expression  
 CC and activity such as cancer, immune, and autoimmune disorders and  
 CC diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis,  
 CC immunodeficiency (e.g. common variable immunodeficiency (CVID) and  
 CC acquired immunodeficiency syndrome (AIDS)). ABP4390-ABP4728 represent  
 CC the antibodies and fragments of the antibodies described in the method of  
 CC the invention

XX (HUMA-) HUMAN GENOME SCI INC.

XX Ruben SM, Barash SC, Choi GH, Vaughan TJ, Hilbert D;

XX WPI; 2003-505530/47.

XX Novel antibody that immunospecifically binds to a B lymphocyte stimulator  
 PT (Blys), useful for detecting and treating diseases or disorders e.g.  
 PT rheumatoid arthritis, asthma and leukemia.

XX Example 1; SEQ ID NO 1953; 394pp; English.

XX This invention relates to novel antibodies that immunospecifically bind  
 CC to B lymphocyte stimulator (Blys). The Blys gene has been mapped to  
 CC chromosome 13q34 and encodes a protein that is a member of the tumour  
 CC necrosis factor superfamily and induces both in vivo and in vitro B cell  
 CC proliferation and differentiation. Specifically, it refers to single  
 CC chain antibody molecules (scFvs) derived, preferably, from the variable  
 CC heavy CDR3 region that immunospecifically bind to a polypeptide, or  
 CC fragment thereof, of either human, murine, rat or monkey Blys. The

CC present invention refers to the use of such antibodies in various methods  
 CC for the detection, diagnosis and prognosis of diseases related to the  
 CC aberrant expression or inappropriate function of Blys or its receptor. As  
 CC such, these compositions are useful for identifying immune disorders  
 CC including myasthenia gravis and multiple sclerosis, inflammatory  
 CC disorders e.g. asthma and rheumatoid arthritis, infectious diseases such  
 CC as AIDS and proliferative disorders including leukaemia, carcinoma and  
 CC lymphoma. Accordingly, they can be described as exhibiting various  
 CC activities such as antirheumatic, antiarthritic, neuroprotective,  
 CC antiinflammatory, antiasthmatic, antiallergic and cytostatic. This  
 CC polypeptide sequence is a single chain antibody that binds Blys of the  
 CC invention. NOTE: The sequence data for this patent did not form part of  
 CC the printed specification, but was obtained in electronic format  
 CC directly from WIPO at ftp.wipo.int/pub/published pct\_sequences.

XX New heterospecific polypeptide constructs, useful for preventing or  
 PT treating, for e.g. inflammation or allergies, comprises single domain  
 PT antibodies directed against a therapeutic or diagnostic target or against  
 PT a serum protein.

XX Claim 28; SEQ ID NO 24; 95pp; English.

XX The invention relates to a novel polypeptide construct comprising at  
 CC least one single domain antibody directed against a therapeutic and/or  
 CC diagnostic target, and at least one single domain antibody directed  
 CC against a serum protein. An antibody of the invention has  
 CC antiinflammatory, antirheumatic, antiarthritic, neuroprotective,  
 CC cerebroprotective, vasotropic, antianginal, cardiant, and antiallergic

CC activity, and may have a use in gene therapy. The composition and methods  
 CC of the invention are useful for treating, preventing and/or alleviating  
 CC disorders relating to inflammatory processes, rheumatoid arthritis,  
 CC Crohn's disease, ulcerative colitis, multiple sclerosis, diseases or  
 CC conditions relating to platelet-mediated aggregation or dysfunction (e.g.  
 CC cerebral ischaemic attack, unstable angina pectoris, cerebral infarction,  
 CC myocardial infarction, peripheral arterial occlusive disease, restenosis,  
 CC conditions arising from coronary by-pass graft or coronary artery valve  
 CC replacement and coronary interventions such as angioplasty, stenting or  
 CC atherectomy), allergic reactions (e.g. hay fever, asthma, atopic  
 CC dermatitis, allergic skin reactions, allergic eye reactions or food  
 CC allergies), or disorders or conditions where the immune system is  
 CC overactive (e.g. autoimmune disorders or organ transplant rejection). In  
 CC addition, these are used for treating, preventing or alleviating  
 CC disorders or conditions in which the above targets are involved, or for  
 CC preparing a medicament for treating, preventing or alleviating the above  
 CC disorders or conditions or the symptoms of a disease requiring a  
 CC therapeutic or diagnostic compound that is not rapidly cleared from the  
 CC circulation or that remains active in the circulation for extended  
 CC periods of time. The present sequence represents an antibody of the  
 CC invention.

XX New phage display library of variable heavy domain antigen-binding  
PT fragments derived from llama antibodies, useful for in vitro selection  
PT against any antigen of interest as a target.  
XX  
XX Disclosure; Page 19a; 46pp; English.  
XX  
XX The present invention relates to a phage display library of variable  
CC heavy domain (VHH or VH) fragments (sdAb fragments) derived from llama  
CC antibodies. The library is useful for in vitro selection against any  
CC antigen of interest as a target. Single domain anti-idiotypic antibody  
CC fragments are isolated from the library using phage display technology  
CC and an antibody serving as an antigen. Such anti-idiotypic antibody  
CC fragments have great potential in evoking the immune system response to  
CC pathological antigens and in vaccine development. The large size of the  
CC library considerably increases the probability of isolating from it  
CC antigen-binding fragments having high affinity to almost any  
CC predetermined target (antigen of interest). The library eliminates the  
CC development of anti-idiotypic antibodies by immunisation and allows  
CC isolation of anti-idiotypic antibodies. AAU82435-AAU82635 represent the  
CC llama heavy chain domain fragments of the invention. (Updated on 29-AUG-  
CC 2003 to standardise OS field)

XX Recovering a polypeptide that unfolds reversibly from a repertoire of
PT polypeptides for treating e.g., cancer, by unfolding a portion of the
PT displayed polypeptides and refolding a portion of the unfolded
PT polypeptides.
XX
XX Disclosure; SEQ ID NO 180; 222pp; English.
PS
XX The invention describes a method of recovering a polypeptide that unfolds
CC reversibly from a repertoire of polypeptides that unfolds reversibly and
CC has a common selectable characteristic that distinguishes folded
CC polypeptides from unfolded or misfolded polypeptides. The method
CC comprises: providing a polypeptide display system comprising the
CC repertoire of displayed polypeptides; unfolding at least a portion of the
CC displayed polypeptides; refolding at least a portion of the unfolded
CC polypeptides; and recovering at least one polypeptide that unfolds
CC reversibly and has the selectable characteristic from the refolded
CC portion. The method is useful in recovering a polypeptide that unfolds
CC reversibly from a repertoire of polypeptides that unfolds reversibly. The
CC library or repertoire is useful for selecting a polypeptide comprising an
CC antibody variable domain that unfolds reversibly or a polypeptide that
CC refolds reversibly and comprising an antibody format. The polypeptide is
CC useful in the manufacture of a medication for diagnosing, treating or
CC preventing a disease or medical condition mediated by a cytokine,
CC cytokine receptor, enzyme, enzyme co-factor or DNA binding protein, such
CC as an inflammatory state, allergic hypersensitivity, cancer, bacterial or
CC viral infection or an autoimmune disorder, e.g., asthma, psoriasis, Type
CC I diabetes, multiple sclerosis, rheumatoid arthritis, systemic lupus
CC erythematosus, Crohn's disease, myasthenia gravis, leukemia or solid
CC tumor. This is the amino acid sequence of complementarity determining
CC region (CDR) used in a polypeptide display system for selection of
CC reversibly folding peptides.

XX
XX Novel human antibody which binds human interleukin (IL)-4 receptor and is
PT capable of inhibiting IL-4 induced biological activity, functions as IL-4
PT antagonist and is useful for treating septic arthritis, scleroderma.
XX
XX Claim 4; Page 83-84; 85pp; English.
XX
XX The invention relates to a human antibody (an interleukin (IL)-4
CC antagonist) (I) that binds human IL-4 receptor (IL-4R), and is capable of
CC inhibiting an IL-4-induced biological activity. (I) is also useful for
CC inhibiting both IL-4-induced biological activity and IL-13-induced
CC biological activity in vivo in a human, and for treating septic arthritis
CC in a human afflicted with septic arthritis. (I) is also used for treating
CC conditions such as septic/reactive arthritis, dermatitis herpetiformis,
CC urticaria (especially chronic idiopathic urticaria), ulcers, gastric
CC inflammation, mucosal inflammation, ulcerative colitis, Crohn's disease,
CC inflammatory bowel disease, other disorders of the digestive system in
CC which IL-4 plays a role (e.g. IL-4-induced inflammation of part of the
CC gastrointestinal tract), conditions in which IL-4-induced barrier
CC disruption plays a role (e.g. conditions characterized by decreased
CC epithelial barrier function in the lung or gastrointestinal tract),
CC scleroderma, hypertrophic scarring, Whipple's disease, benign prostate
CC hyperplasia, IL-4-induced pulmonary conditions, allergic reactions to
CC medication, Kawasaki disease, sickle cell disease or crisis, Churg-
CC Strauss syndrome, Grave's disease, pre-eclampsia, Sjogren's syndrome,
CC autoimmune lymphoproliferative syndrome, autoimmune haemolytic anemia,
CC Barrett's esophagus, autoimmune uveitis, tuberculosis, nephrosis,
CC pemphigus vulgaris or bullous pemphigoid (autoimmune blistering
CC diseases), and myasthenia gravis (an autoimmune muscular disease). IL-4
CC antagonists also find use as adjuvants to allergy immunotherapy and as
CC vaccine adjuvants, especially when directing the immune response toward a
CC TH1 response would be beneficial in treating or preventing the disease.

 XX  
 CC The present invention relates to new interleukin-4 (IL-4) receptor  
 CC antagonists, and in particular to antibodies and antibody derivatives  
 CC that bind to interleukin-4 receptor alpha (IL-4R alpha). IL-4 stimulates  
 CC the growth of T cells, mast cells, granulocytes, megakaryocytes, and  
 CC erythrocytes. IL-4 also stimulates the proliferation of several IL-2 and  
 CC IL-3-dependent cell lines, induces expression of class II major  
 CC histocompatibility complex molecules on resting B cells, and enhances the  
 CC secretion of IgE and IgG1 isotypes by stimulated B cells. IL-4 is  
 CC associated with a TH2-type immune response. IL-4 has been implicated in a  
 CC number of disorders, such as allergy and asthma. Provided is an antibody  
 CC comprising a light chain variable domain or a heavy chain variable  
 CC domain, where the antibody binds to the human interleukin (IL)-4  
 CC receptor. The antibody domains each have various amino acid  
 CC substitutions. Also disclosed is a method of inhibiting an IL-4 receptor  
 CC by contacting a cell expressing an the receptor with the antibody under  
 CC binding conditions, where binding inhibits signal transduction through  
 CC the IL-4 receptor. The antibody is useful for treating a condition such  
 CC as such as an inflammatory or cancerous condition, e.g. asthma,  
 CC arthritis, dermatitis, urticaria, ulcerative colitis, scleroderma,  
 CC scarring, prostate hyperplasia, a lung disorder, condition of the  
 CC epithelial barrier, digestive system disorder, allergic reaction to a  
 CC drug, Kawasaki disease, sickle cell anemia, Grave's disease, pre-  
 CC eclampsia, Sjogren's syndrome, autoimmune disease, Barrett's esophagus,  
 CC tuberculosis, cystic fibrosis, chronic obstructive pulmonary disease,  
 CC adult respiratory distress syndrome, hyper IgE syndrome, pemphigus  
 CC vulgaris, myasthenia gravis, chronic fatigue syndrome, or nephrosis. The  
 CC antibody has a mutation in a hinge region that alleviates a tendency to  
 CC form intra-H chain disulfide bond antibody. The present sequence is an  
 CC undefined antibody heavy chain variable region, designated 63.

 XX  
 XX Composition useful for treating or preventing sepsis, autoimmune  
 PT disorders and pulmonary disorders, comprises polypeptide having single  
 PT human immunoglobulin variable domain that binds polypeptide antigen, e.g.  
 PT human cytokine.  
 XX  
 XX Example 11; SEQ ID NO 90; 169pp; English.  
 XX  
 CC The invention relates to a composition comprising a polypeptide having a  
 CC single human immunoglobulin variable domain that binds a polypeptide  
 CC antigen with Kd less than or equal to 100 nM, where the polypeptide is  
 CC present at a concentration of at least 400 microm as determined by  
 CC absorbance of light at 280 nm wavelength. The polypeptides are termed  
 CC domain antibodies (dab) and may occur as homodimers or heterodimers  
 CC (where the second polypeptide is a partner dab which does not bind to the  
 CC target protein linked via (Gly4Ser)n linkers. The dab polypeptides  
 CC contain human framework regions, synthetic/modified complementarity  
 CC domains (CDR) or contain mutations at positions defined in the  
 CC specification. dab antibodies were created which bind to TNFalpha, TNF  
 CC receptor (p55), mouse serum albumin (MSA) and human serum albumin (HSA).  
 CC The polypeptide is useful for treating or preventing a disease or  
 CC disorder in an individual in need of treatment, which involves  
 CC administering the polypeptide to the individual. The polypeptide (or an

CC extended release dosage formulation containing it) is useful for  
 CC preventing or treating diseases or disorders related to target antigens,  
 CC such as inflammation, sepsis, allergic hypersensitivity, cancer,  
 CC autoimmune disorders (e.g., diabetes, rheumatoid arthritis, multiple  
 CC sclerosis, Crohn's disease, ulcerative colitis, aplastic anemia,  
 CC Hashimoto's disease, Graves disease, Reiter's syndrome), transplant  
 CC rejection, graft versus host disease, pulmonary disorder (e.g., pneumonia  
 CC fibrosis, pulmonary sarcoidosis), cardiac disorders (e.g., ischemia of  
 CC heart), inflammatory bone disorders, hepatitis, reperfusion injury and  
 CC pyrexia. The polypeptide comprises single immunoglobulin variable domain  
 CC polypeptides that bind target antigen with high affinity and are soluble  
 CC at high concentration, without aggregation or precipitation. The present  
 CC sequence represents a dAb antibody of the invention.

XX New polypeptides derived from single domain heavy chain antibodies  
 PT directed to interferon-gamma, useful for preventing, treating or  
 PT alleviating disorders such as inflammation, multiple sclerosis, diabetes  
 PT or Grave's disease.

XX Claim 3; SEQ ID NO 34; 86pp; English.

XX The present invention relates to an anti-interferon-gamma (anti-IFN- $\epsilon$ ggr;  
 CC ) polypeptide comprising at least one anti-IFN- $\epsilon$ ggr; single domain  
 CC antibody. The composition and methods are useful for treating, preventing  
 CC and/or alleviating disorders related to inflammatory processes, disorders

CC requiring the delivery of an IFN- $\epsilon$ ggr; modulating polypeptide that is  
 CC able to pass through the gastric environment without being inactivated,  
 CC disorders requiring the delivery of an IFN- $\epsilon$ ggr; modulator or a  
 CC therapeutic compound to the vaginal and/or rectal tract, to the upper  
 CC respiratory tract and lung, through the tissues beneath the tongue or  
 CC through the skin, or disorders increasing the permeability of the  
 CC intestinal mucosa. These may also be used for preparing a medicament for  
 CC treating, preventing and/or alleviating the disorders cited above,  
 CC particularly inflammation, rheumatoid arthritis, Crohn's disease,  
 CC ulcerative colitis, inflammatory bowel syndrome, multiple sclerosis,  
 CC Addison's disease, autoimmune hepatitis, autoimmune parotitis, diabetes  
 CC type I, epidiidymitis, glomerulonephritis, Grave's disease, Guillain-Barre  
 CC syndrome, Hashimoto's disease, hemolytic anemia, systemic lupus  
 CC erythematosus, male infertility, myasthenia gravis, pemphigus, psoriasis,  
 CC rheumatic fever, sarcoidosis, scleroderma, Sjogren's syndrome,  
 CC spondyloarthropathies, thyroiditis or vasculitis. The anti-IFN- $\epsilon$ ggr;  
 CC polypeptide is also used for purifying IFN- $\epsilon$ ggr; or for inhibiting the  
 CC interaction between the IFN- $\epsilon$ ggr; and IFN- $\epsilon$ ggr; receptors. The present  
 CC sequence represents an anti human -IFN-gamma polypeptide.

 XX Identifying peptides that induce cytotoxic T-lymphocyte, CTL response  
 PT against IGE, by identifying peptide eliciting CTL response to IGE  
 PT peptides naturally presented by major histocompatibility complex class I  
 PT protein.  
 XX  
 XX Example 7; Page 164-167; 187pp; English.  
 PS  
 XX The present invention describes a method (M1) for identifying peptides  
 CC that induce cytotoxic T-lymphocyte (CTL) response against immunoglobulin  
 CC E (IGE), comprising providing a test peptide (T) suspected of being able  
 CC to bind to major histocompatibility complex (MHC) class I molecule, and  
 CC evaluating (T) for ability to elicit in a mammal a CTL response to  
 CC naturally processed and presented IGE peptides, where a peptide that  
 CC induces such a response is identified. Also described are compositions:  
 CC (C1) comprising at least one immunogenic peptide (I) identified by (M1);  
 CC (C2) comprising at least one isolated polynucleotide encoding (I); and  
 CC (C3) comprising antigen-presenting cells that recognise at least one (I).  
 CC Where C1-3 are able to bind to at least one MHC class I molecule and to  
 CC elicit in a mammal a CTL response to naturally processed and presented  
 CC IGE peptides. C1-3 have anti-allergic, antiasthmatic, immunosuppressive,  
 CC vasotropic, dermatological, anti-inflammatory and cytostatic activities,  
 CC and can be used as inducers of a CTL response against IGE, and in  
 CC vaccines. C1-3 can be used for modulating an IGE-mediated condition in a  
 CC mammal. C1-3 are useful for modulating an IGE-mediated condition such as  
 CC IGE-mediated atopic hypersensitivity condition, IGE-mediated non-atopic  
 CC hypersensitivity condition, IGE myeloma in a mammal. Preferably, C1-3 are  
 CC useful for treating atopic hypersensitivity conditions (such as allergic  
 CC rhinitis, allergic asthma, food allergies, or atopic dermatitis), non-  
 CC atopic hypersensitivity conditions (such as anaphylaxis, and urticaria  
 CC hives). The present sequence represents an IGE heavy chain amino acid  
 CC sequence, which is given in an example from the present invention

 XX Preparing a blood brain barrier (BBB) transmemigrating llama antibody  
 PT fragment (LF) by enriching phages displaying LF, for species internalized  
 PT by endothelial cells expressing BBB antigens, and which transmemigrate  
 PT across in vitro BBB.  
 XX  
 PS Disclosure; Page 20; 70pp; English.  
 XX  
 XX The invention discloses the preparation of a human blood-brain barrier  
 CC (BBB) transmemigrating single-domain antibody (dAB or sDAB) fragment  
 CC derived from a llama antibody. Preparation involves providing a phage  
 CC display library of antigen-binding antibody fragments derived from llama  
 CC antibodies, enriching the library for phage species selectively binding  
 CC to, and internalised into, human cerebrovascular endothelial cells  
 CC (HCBC) expressing BBB antigens and then recovering these enriched library  
 CC phage particles. The DNA of the phage particles identified is then cloned  
 CC into an expression vector and the antigen-binding antibody fragments can  
 CC then be prepared. Each antigen-binding fragment comprises at least a part  
 CC of the variable heavy domain (VH or VH) of a llama antibody. The  
 CC variable domains are not uniformly variable throughout their length and  
 CC three regions, known as hypervariable regions (loops) or complementarity  
 CC determining regions (CDR1, CDR2 and CDR3), show more variability than the  
 CC rest of the domain. It is these regions that determine the specificity of  
 CC the antigen-antibody interaction. The antigen-binding antibody fragments  
 CC are useful as therapeutic or diagnostic agents, when linked, directly or  
 CC indirectly, covalently or non-covalently, to a therapeutic or diagnostic  
 CC entity. Due to their small size, and selectivity of binding to brain  
 CC endothelium and ability to cross the BBB, the antigen-binding antibody  
 CC fragments are useful, not only as vectors for the delivery of therapeutic  
 CC fragments and diagnostic agents into the brain, but also as molecular templates for  
 CC designing drug and gene delivery vectors targeting the central nervous  
 CC system. The peptides in ABSS1973-ABSS2059 show the CDR1/H1, CDR2 and CDR3  
 CC variable sequences from 28 sDABs from the llama phage display library.

 PS New phage display library of variable heavy domain antigen-binding  
 PT fragments derived from llama antibodies, useful for in vitro selection  
 PT against any antigen of interest as a target.  
 XX  
 XX Disclosure; Page 13a; 46pp; English.  
 XX  
 CC The present invention relates to a phage display library of variable  
 CC heavy domain (VHH or VH) fragments (sdbb fragments) derived from llama  
 CC antibodies. The library is useful for in vitro selection against any  
 CC antigen of interest as a target. Single domain anti-idiotypic antibody  
 CC fragments are isolated from the library using phage display technology  
 CC and an antibody serving as an antigen. Such anti-idiotypic antibody  
 CC fragments have great potential in evoking the immune system response to  
 CC pathological antigens and in vaccine development. The large size of the  
 CC library considerably increases the probability of isolating from it  
 CC antigen-binding fragments having high affinity to almost any  
 CC predetermined target (antigen of interest). The library eliminates the  
 CC development of anti-idiotypic antibodies by immunisation and allows  
 CC isolation of anti-idiotypic antibodies. AAU82435-AAU82635 represent  
 CC llama heavy chain domain fragments of the invention. (Updated on 29-AUG-  
 CC 2003 to standardise OS field)

 DR Spatially-addressable set of single exon nucleic acid probes, used to measure gene expression in human lung samples.  
 XX Claim 27; SEQ ID NO 32647; 634pp; English.  
 PS The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of

12614 nucleic acid sequences mentioned in the specification, or their complements or the 12367 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes; the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung mRNA, and (b) measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single gene, comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several tissues and/or cell types using hybridisation to a single exon microarrays having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types comprising one the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORF). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases such as asthma, lung cancer, chronic obstructive pulmonary disease (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomatosis, pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary dyskinesia, pulmonary hypertension and hyaline membrane disease. The present sequence is a peptide/protein encoded by a single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

 XX Hagai Y, Lazarovits J, Guy R, Lipschitz O, Szanton E, Levanon A;  
 PI Plaksin D, Peretz T;  
 XX WPI; 2002-619166/66.  
 XX Novel peptide/polypeptide for cancer therapy has Fv molecule, construct  
 PT or fragment, or construct of fragment with enhanced binding  
 PT characteristics so as to selectively bind target cell in favor of other  
 PT cells.  
 XX Claim 13; Page 183; 232pp; English.  
 XX The invention relates to a peptide or polypeptide comprising an Fv  
 CC molecule, a construct or fragments or a construct of a fragment with  
 CC enhanced binding characteristics which selectively and/or specifically  
 CC binds to a target cell in favour of other cells, where binding is  
 CC primarily determined by a first hypervariable region and Fv is a single  
 CC chain Fv (scFv) or a disulfide Fv (dsFv). The peptide, optionally in  
 CC association with or attached, coupled, combined, linked or fused to a  
 CC pharmaceutical agent, is useful in the manufacture of a medicament, where  
 CC the medicament has activity against a diseased cell, preferably a cancer  
 CC cell (selected from carcinoma, sarcoma, leukaemia, adenoma, lymphoma,  
 CC myeloma, blastoma, seminoma, and melanoma, where the leukaemia cell is an  
 CC acute myeloid leukaemia cell). The peptide is also useful for preparing a  
 CC composition for use in inhibiting the growth of a diseased or cancer  
 CC cell. This sequence represents a human Fv molecule hypervariable region  
 CC related peptide of the invention

 "Transcription of a quail gene expressed in embryonic retinal cells is  
 shut off sharply at hatching.";  
 Proc. Natl. Acad. Sci. U.S.A. 88:4503-4507(1991).  
 -!- FUNCTION: Could play a role in the late stage of neuroretina  
 morphogenesis.  
 -!- SUBCELLULAR LOCATION: Secreted (Potential).  
 -!- TISSUE SPECIFICITY: Glial (Mueller) cells of the neuroretina.  
 -!- DEVELOPMENTAL STAGE: Is transcribed at late phase of retinal  
 development in the embryo, and is shut off sharply at hatching.  
 -!- SIMILARITY: Belongs to the SPARC family.  
 -!- SIMILARITY: Contains 1 EF-hand domain.  
 -!- SIMILARITY: Contains 1 follistatin-like domain.  
 -!- SIMILARITY: Contains 1 Kazal-like domain.

CC -1- DISEASE: One of the main antigens reacting with anti-Mi-2 positive  
sera of dermatomyositis.  
CC -1- SIMILARITY: Belongs to the SNF2/RAD54 helicase family.

CC CC -1- SIMILARITY: Contains 2 chromo domains.  
CC CC -1- SIMILARITY: Contains 2 PHD-type zinc fingers.

RESULT 50  
US-09-985-442-6  
; Sequence 6, Application US/09985442  
; Patent No. 6692942  
; GENERAL INFORMATION:  
; APPLICANT: Filpula, David R.  
; APPLICANT: Wang, Maoliang  
; APPLICANT: Whitlow, Marc D.  
; TITLE OF INVENTION: No. 6692942el Method for Targeted Delivery of Nucleic Acids  
; FILE REFERENCE: 0977.2300003  
; CURRENT APPLICATION NUMBER: US/09/985,442  
; CURRENT FILING DATE: 2001-11-02  
; PRIOR APPLICATION NUMBER: 09/420,592  
; PRIOR FILING DATE: 1999-10-19  
; PRIOR APPLICATION NUMBER: 60/104,949  
; PRIOR FILING DATE: 1998-10-20  
; NUMBER OF SEQ ID NOS: 13  
; SOFTWARE: PatentIn Ver. 2.1  
; SEQ ID NO 6  
; LENGTH: 283  
; TYPE: PRT  
; ORGANISM: Artificial Sequence  
; FEATURE:  
; OTHER INFORMATION: Description of Artificial Sequence: Kabat  
; NAME/KEY: UNSURE  
; LOCATION: (232)  
; OTHER INFORMATION: May be any amino acid.  
; NAME/KEY: UNSURE  
; LOCATION: (234)  
; OTHER INFORMATION: May be any amino acid.  
; NAME/KEY: UNSURE  
; LOCATION: (239)  
; OTHER INFORMATION: May be any amino acid.  
US-09-985-442-6

Query Match 58.5%; Score 48; DB 2; Length 283;  
Best Local Similarity 64.3%; Pred. No. 3.6;  
Matches 9; Conservative 2; Mismatches 3; Indels 0; Gaps 0;

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

CC comprises the rW12 light (L) and heavy (H) chain variable regions, or  
 CC silent mutations; and (ii) hAb comprises rW12 complementarity determining  
 CC regions (CDR) and humanised framework (FR) regions. The hAb is used as a  
 CC vaccine to stimulate an immune response in a patient against cancers  
 CC expressing CEA. The hAb, can be used to clear non-targeted antibody in a  
 CC method of diagnosis or treatment of a patient where a CEA antibody is  
 CC used as a (pre-)targeting or therapy agent. The CAB is used to detect the  
 CC presence of an antibody that specifically binds to CEA in a sample

 PT antibodies - useful in detection of anti-CEA antibodies and as vaccine to  
 PT stimulate immune response against cancer.

XX Claim 7; Fig 1; 46pp; English.

CC This sequence represents a modified version of the rat rW12 heavy chain  
 CC variable region, designated KOLWI2VH-1. This sequence is used in an  
 CC antibody of the invention. The antibody of the invention is a chimeric or  
 CC humanised anti-idiotype antibodies (cAb and hAb, respectively) or a  
 CC fragment which specifically binds to the idiotype region of an anti-  
 CC carcinoembryonic antigen (CEA), where: (i) cAb comprises the rW12 light  
 CC (L) and heavy (H) chain variable regions, or silent mutations; and (ii)  
 CC hAb comprises rW12 complementarity determining regions (CDR) and  
 CC humanised framework (FR) regions. The hAb is used as a vaccine to  
 CC stimulate an immune response in a patient against cancers expressing CEA.  
 CC The hAb, can be used to clear non-targeted antibody in a method of  
 CC diagnosis or treatment of a patient where a CEA antibody is used as a  
 CC (pre-)targeting or therapy agent. The cAb is used to detect the presence  
 CC of an antibody that specifically binds to CEA in a sample

 XX This sequence represents the human hW12 heavy chain. This sequence is  
 CC used in an antibody of the invention. The antibody of the invention is a  
 CC chimeric or humanised anti-idiotypic antibodies (cAb and hAb,  
 CC respectively) or a fragment which specifically binds to the idiotype  
 CC region of an anti-carcinoembryonic antigen (CEA), where: (i) cAb  
 CC comprises the rW12 light (L) and heavy (H) chain variable regions, or  
 CC silent mutations; and (ii) hAb comprises rW12 complementarity determining  
 CC regions (CDR) and humanised framework (FR) regions. The hAb is used as a  
 CC vaccine to stimulate an immune response in a patient against cancers  
 CC expressing CEA. The hAb, can be used to clear non-targeted antibody in a  
 CC method of diagnosis or treatment of a patient where a CEA antibody is  
 CC used as a (pre-)targeting or therapy agent. The cAb is used to detect the  
 CC presence of an antibody that specifically binds to CEA in a sample

XX  
XX Claim 1; SEQ ID NO 67090; 15pp; English.

XX The invention describes a recombinant DNA construct comprising a  
CC polynucleotide consisting of a sequence encoding an amino acid sequence  
CC available in electronic form from the US patent office at  
CC ftp.segdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide  
CC of the invention are also useful in physical arrays of molecules and as  
CC plant breeding markers. The recombinant DNA construct is useful for  
CC improving plant tolerance to cold, heat, drought, herbicides, extreme  
CC osmotic conditions, pathogens or pests, for manipulating growth rate in  
CC plant cells by modification of the cell cycle pathway, for conferring  
CC increased resistance to plant disease, for producing galactomannan,  
CC lignin or plant growth regulators, for increasing the rate of homologous  
CC recombination in plants, for improving yield by modification of  
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake  
CC or by providing improved plant growth and development under at least one  
CC stress condition or for modifying seed oil or protein yield and/or  
CC content. This is the amino acid sequence of a plant full length insert  
CC polypeptide that can be used in the recombinant DNA construct of the  
CC invention.

XX New exo- and endo-glucanase polypeptides and polynucleotides useful in  
PT e.g. cell wall elongation or expansion, enhancing silage or forage crop  
PT digestibility, improving plant defense against pathogens and stress.

XX Claim 9; Page 69; 108pp; English.

XX The present sequence is one of a number of glucanase polypeptides  
CC isolated from Zea mays. The nucleic acids encoding for glucanases are  
CC useful for improving cell wall elongation or expansion and altering the  
CC growth of a plant or improving kernel growth rates, enhancing silage or  
CC forage crop digestibility, plant defense against pathogens and stress,  
CC flowering, fruit and seed maturation, abscission and senescence, and

CC tissue differentiation. The nucleic acids may also be used as probes or  
CC amplification primers in the detection, quantitation or isolation of gene  
CC transcripts, and for detecting deficiencies in mRNA levels in screening  
CC for a desired transgenic plant. They can also be used for detecting gene  
CC mutations, for monitoring upregulation of expression or changes in enzyme  
CC activity in screening assays of compounds, and for detection of any  
CC number of allelic variants of the gene, as molecular markers in plant  
CC breeding programmes. The nucleic acids can be used for recombinant  
CC expression of exo- or endo-glucanase polypeptides, and as immunogens in  
CC preparing or screening antibodies. The proteins may also be used in  
CC assays for enzyme agonists or antagonists, or as immunogens or antigens  
CC to obtain antibodies immunoreactive with the protein

 XX New recombinant DNA construct comprising a promoter positioned to provide

PT for expression of a polynucleotide encoding a polypeptide from a  
 PT microbial source, useful for producing plants with improved properties.  
 PS Claim 1; SEQ ID NO 12370; 122pp; English.

XX The invention relates to a recombinant DNA construct comprising a  
 CC promoter functional in a plant cell, where the promoter is positioned to  
 CC provide for expression of a polynucleotide encoding a polypeptide from a  
 CC microbial source. The invention also relates to a transformed plant  
 CC comprising the recombinant DNA construct and a method of producing a  
 CC transformed plant having an improved property. The plant is a crop plant  
 CC such as maize or soybean. The method of producing a transformed plant  
 CC having an improved property comprises transforming a plant with the  
 CC recombinant DNA construct and growing the transformed plant, where the  
 CC polynucleotide or polypeptide is useful for improving plant properties.  
 CC The recombinant DNA construct is useful for producing plants with  
 CC improved plant properties, e.g. improved cold, heat or drought tolerance,  
 CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,  
 CC increased resistance to plant disease, better growth rate by modification  
 CC of the cell cycle pathway with plant growth regulators, increased rate of  
 CC homologous recombination, modified seed oil or protein yield and/or  
 CC content, improved yield by modification of carbohydrate, nitrogen or  
 CC phosphorus use and/or uptake, by modification of photosynthesis or by  
 CC providing improved plant growth and development under at least one stress  
 CC condition, improved lignin production or improved galactomannan  
 CC production. This sequence represents a bacterial polypeptide used in the  
 CC scope of the invention. Note: The sequence data for this patent did not  
 CC form part of the printed specification but was obtained in electronic  
 CC format from USPTO at seqdata.uspto.gov/sequence.html.

XX New antisense nucleic acids, useful for identifying proteins or screening  
 PT for homologous nucleic acids required for cellular proliferation to  
 PT isolate candidate molecules for rational drug discovery programs.

XX Claim 25; SEQ ID NO 76434; 1766pp; English.

XX The invention relates to an isolated nucleic acid comprising any one of  
 CC the 6213 antisense sequences given in the specification where expression  
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:  
 CC (1) a vector comprising a promoter operably linked to the nucleic acid  
 CC encoding a polypeptide whose expression is inhibited by the antisense  
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated  
 CC polypeptide or its fragment whose expression is inhibited by the  
 CC antisense nucleic acid; (4) an antibody capable of specifically binding  
 CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular  
 CC proliferation or the activity of a gene in an operon required for  
 CC proliferation; (7) identifying a compound that influences the activity of  
 CC the gene product or that has an activity against a biological pathway  
 CC required for proliferation, or that inhibits cellular proliferation; (8)  
 CC identifying a gene required for cellular proliferation or the biological  
 CC pathway in which a proliferation-required gene or its gene product lies  
 CC or a gene on which the test compound that inhibits proliferation of an  
 CC organism acts; (9) manufacturing an antibiotic; (10) profiling a  
 CC compound's activity; (11) a culture comprising strains in which the gene  
 CC product is overexpressed or underexpressed; (12) determining the extent  
 CC to which each of the strains is present in a culture or collection of  
 CC strains; or (13) identifying the target of a compound that inhibits the  
 CC proliferation of an organism. The antisense nucleic acids are useful for  
 CC identifying proteins or screening for homologous nucleic acids required  
 CC for cellular proliferation to isolate candidate molecules for rational  
 CC drug discovery programs, or for screening homologous nucleic acids  
 CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,  
 CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of  
 CC the target prokaryotic essential genes. Note: The sequence data for this  
 CC patent did not form part of the printed specification, but was obtained  
 CC in electronic format directly from WIPO at  
 CC ftp.wipo.int/pub/published\_pct\_sequences

XX PT Genomic sequence of equine rhinovirus 1 - and derived proteins or virus-

PT like particles, useful in vaccines and as diagnostic agents.

XX Claim 2; Page 30-32; 60pp; English.

CC The present sequence represents the amino acid sequence of the

CC polyprotein of equine rhinovirus 1 (ERHV1). The taxonomic status of ERHV1

CC is unclear, as physicochemical studies have shown that the nucleic acid

CC density and base comparison of ERHV1 differs from other rhinoviruses. To

CC this end, the nucleotide sequence encoding the polyprotein of ERHV1 was

CC deduced. Analysis of this sequence suggests that ERHV1 is more closely

CC related to foot-and-mouth disease virus. Individual ERHV1 proteins can be

CC used to make vaccines to protect horses (and possibly other animals)

CC against ERHV1. Oligonucleotide primers and probes can be used for

CC diagnosis of ERHV1 or related viruses, while antigens of the ERHV1

CC polyprotein can be used to detect ERHV1-specific antibodies in the blood,

CC particularly in enzyme-linked immunosorbent assay. They can differentiate

CC between infected animals and those vaccinated with ERHV1 vaccines (the

CC infected animals will have antibodies reactive with non-capsid proteins

CC but vaccinated animals will not). Fragments of the DNA sequence represent

CC individual genes of the virus and can be expressed in host systems to

CC produce recombinant proteins. Virus like particles containing the

CC individual ERHV1 proteins, can also be used as vectors for delivering

CC therapeutic or other useful agents, including vaccinating epitopes from

CC other pathogens or reproductive hormones. (Updated on 27-AUG-2003 to

XX correct OS field.)

XX PT Composition comprising crossreactive immunogenic antigen encoded by open

XX PT reading frame 2086 of Neisseria sp., that provides immunogenicity against

XX PT meningitis, or its immunogenic portion or biological equivalent.

XX Claim 4; SEQ ID NO 290; 480pp; English.  
 PS This invention relates to a novel composition which comprises at least  
 CC one protein (or fragment of) encoded by an open reading frame (ORF) of a  
 CC *Neisseria* sp. (ORF2086), where the ORF encoding a crossreactive  
 CC immunogenic antigen provides immunogenicity against infection by  
 CC *Neisseria meningitidis* serogroup B in a subject. The composition of the  
 CC *Neisseria meningitidis* serogroup B in a subject. The composition of the  
 CC invention may have antibacterial or antiinflammatory activity through the  
 CC induction of the immune response. The invention may be useful for the  
 CC treatment of bacterial meningitis in a mammal. One or more polypeptides  
 CC or nucleic acids encoding such polypeptides are useful in a composition  
 CC or as a part of the treatment regimen for the prevention of amelioration  
 CC of *Streptococcus pneumoniae* infection. The composition of the invention  
 CC is non-pathogenic and substantially free from any infectious impurities.  
 CC The immunogenic compositions can be compounded with fewer components to  
 CC elicit protection comparable to previously used agents. The present  
 CC sequence is the amino acid sequence of a peptide derived from a *Neisseria*  
 CC meningitidis 2086 subfamily B protein which can be used to create the  
 CC composition of the invention.

XX Increasing the expression levels of a *Neisseria* PorA protein or  
 PT polypeptide in a host cell comprises infecting, transfecting or  
 PT transforming a host cell with an expression vector.

XX Claim 103; SEQ ID NO 65; 161pp; English.

XX This invention relates to a novel method of increasing the expression  
 CC levels of a *Neisseria* PorA protein or polypeptide in a host cell which  
 CC comprises infecting, transfecting or transforming a host cell with an  
 CC expression vector, where codon 18 of the PorA gene is a codon other than  
 CC an ATC. The invention may be useful for the production of compounds with  
 CC an antibacterial activity or a vaccine. The method is useful for

CC increasing the expression levels of a *Neisseria* PorA protein or  
 CC polypeptide in a host cell. The polypeptide or polynucleotide and  
 CC composition are useful for immunising against *Neisseria*. The present  
 CC sequence is that of a fragment of the *Neisseria meningitidis* ORF2086  
 CC protein which may be used in combination with the PorA peptides and  
 CC proteins of the invention to form immunogenic compositions.

XX New immunogenic compositions useful in the preparation of a medicament  
 PT for inducing an immune response in a mammal, particularly in preventing,  
 PT diagnosing and/or treating meningococcal infection.

XX PS Claim 92; SEQ ID NO 290; 160pp; English.

XX The invention describes a composition for the prevention and treatment of  
 CC meningococcal disease. The composition comprises: a protein comprising 10  
 CC -14 amino acids (SEQ ID NO: 444-452), or one of 56 odd numbered sequences  
 CC from SEQ ID NO: 331-443, not given in the specification; a protein  
 CC encoded by a polynucleotide that hybridises to one of the polynucleotides  
 CC that encode SEQ ID NO: 444-452, or one of 56 even numbered sequences from  
 CC SEQ ID NO: 330-442; an immunogenic portion of (a) or (b); or a biological  
 CC equivalent of (a) or (b), or an immunogenic portion of (c). The  
 CC compositions are used in preparing a medicament for inducing an immune  
 CC response in a mammal, where the medicament is effective against bacterial  
 CC meningitis in a mammal. The compositions can be used in preventing,  
 CC diagnosing and/or treating meningococcal infection. This is the amino  
 CC acid sequence of a bactericidal protein 2086 subfamily B associated  
 CC peptide.

XX PT Genomic sequence of *Photorhabdus luminescens* and encoded polypeptides,

PT useful e.g. as therapeutic antimicrobials and agricultural pesticides.

XX PS Claim 2; SEQ ID NO 739; 1205pp; French.

XX CC The invention relates to the isolation of genes and their encoded

CC CC proteins from *Photorhabdus luminescens*. The isolated sequences are

CC CC sources of probes and primers for detecting the genome of *P. luminescens*

CC CC and related species; to study polymorphisms; for gene analysis and for

CC CC detection/amplification of the genes. Antibodies (Ab) raised against the

CC polypeptides encoded by the genes are used for detection/identification

CC of *P. luminescens*, e.g. in foods. The genes, proteins, Ab and cells that

CC carry a gene-containing vector are used to select compounds that

CC modulate, regulate, induce or inhibit expression of the genes in plants,

CC animals or microorganisms other than *P. luminescens* and are able to alter

CC response or sensitivity to toxins and antibiotics produced by *P.*

CC *luminescens*. Cells transformed to express the genes are useful for

CC recombinant production of the proteins, particularly toxins and

CC antibacterials useful as insecticides, bactericides and fungicides. The

CC genes, proteins, vectors containing the genes and Ab are also useful

CC therapeutically (to treat microbial infection by bacteria or fungi that

CC are sensitive to *P. luminescens*-encoded toxins or antibiotics) and as

CC biopesticides. Other uses of the genes and the proteins are as virulence

CC factors and for identifying targets of human diseases for which *P.*

CC *luminescens* is a model (particularly plague and whooping cough). This

CC sequence represents one of the isolated *P. luminescens* proteins

XX PT Composition for producing medicament for preventing *Neisseria* infection

PT in mammal, comprising multiple variant of meningococcal protein NMB1870,

PT as antigen.

XX PS Claim 11; SEQ ID NO 81; 77pp; English.

XX CC The present invention relates to composition (I) comprising at least two

CC multiple variants of meningococcal protein NMB1870 (ADP70202-ADP70246,

CC ADP70278, ADP70280-ADP70286, ADP70288-ADP70295, ADP70324-ADP70343) as

CC antigen. (I) elicit a bactericidal response effective against each of

CC serogroup B *Neisseria meningitidis* strains MC58, 961-5945 and M1239, and

CC also elicit an antibody response which is bactericidal against *N.*

CC *meningitidis* strains in at least 2 of hypervirulent lineages ET-37, ET-5,

CC cluster A4, lineage 3, subgroup I, subgroup III, and subgroup IV-1. In

CC NMB1870 is a lipoprotein. In (I) at least one of the proteins does not  
 CC include the amino acid sequence ADP70271 or ADP70272 within 10 amino  
 CC acids of its N-terminus or at least one of the proteins does not include  
 CC the amino acid sequences ADP70273 within 10 amino acids of its N-terminus  
 CC or at least one of the proteins includes the amino acid sequence  
 CC ADP70274. ADP70271-ADP70274 are sequence motifs for retention or omission  
 CC from the NMB1870 proteins. (I) or (II) is efficiently elicits systemic  
 CC and/or mucosal immunity and thereby prevents/treat meningitis and  
 CC bacteremia. (I) is useful as medicament and for raising an antibody  
 CC response in a mammal for protecting a mammal against a Neisserial  
 CC infection.

 Heterologous expression for the expression of two or more Neisserial  
 PT proteins in fused state.

XX  
 Claim 12; Page 19; 52pp; English.

XX The present invention relates to a method for simultaneous heterologous  
 CC expression of two or more Neisserial proteins which are in a fused state.  
 CC The method is useful for simultaneous heterologous expression of two or  
 CC more Neisserial proteins. A protein that may be unstable or poorly  
 CC expressed on its own is assisted by adding a suitable hybrid partner and  
 CC commercial manufacture is simplified-only one expression and purification  
 CC need to be employed in order to produce two separately- useful proteins.  
 CC The present sequence is Neisseria meningitidis (serogroup B, strain 2996)  
 CC deltaG 741 protein. (Updated on 11-SEP-2003 to standardise OS field)

XX Composition useful for treating infection caused by hypervirulent  
 CC lineages A4, ET-5 and lineage 3 of Neisseria meningitidis serogroup B,  
 CC comprises five antigens NadA protein, 741 protein, 936 protein, 953  
 CC protein and 287 protein.  
 XX  
 Claim 29; SEQ ID NO 3; 53pp; English.  
 XX  
 The present sequence is that of Neisseria meningitidis strain MC58  
 CC (serogroup B) 741 protein from which the N-terminal region (amino acids 1  
 CC -72) has been removed (deltaG-741 protein). This deletion can enhance  
 CC recombinant expression and also removes the lipidation site. Protein 741  
 CC is an extremely effective antigen for eliciting anti-meningococcal  
 CC antibody responses, and is expressed across all meningococcal serogroups.  
 CC The protein, and its variants, can be used in vaccine compositions of the  
 CC invention. The invention is based on the discovery that a small number of  
 CC defined antigens is able to provide broad protection against  
 CC meningococcal infection. A composition is provided which is able induce  
 CC an antibody response that is bactericidal against 2 or more of  
 CC hypervirulent lineages A4, ET-5 and lineage 3 of N. meningitidis  
 CC serogroup B. The preferred composition comprises a mixture of 10 or fewer  
 CC purified antigens, and should not include complex or undefined mixtures  
 CC of antigens such as outer membrane vesicles. The antigens are obtained by  
 CC recombinant expression. A mixture of 5 defined protein antigens has been  
 CC found to elicit a good protective immune response: a NadA protein, a 741  
 CC protein, a 936 protein, a 953 protein, and a 287 protein. For maximum  
 CC cross-strain efficacy, it is preferred that the composition should  
 CC include more than one variant of protein 741; exemplary sequences are  
 CC provided AD0071173-AD007125.

New injectable immunogenic composition comprising saccharide antigens from serogroup B Neisseria meningitidis, Hemophilus influenzae type B and Streptococcus pneumoniae, useful in treating or preventing bacterial meningitis.

Disclosure; SEQ ID NO 3; 46pp; English.

The present sequence is that of the 741 protein from Neisseria meningitidis serogroup MenB strain MC58, minus the N-terminal polyglycine sequence. This deletion can enhance expression. Protein 741 is an extremely effective antigen for eliciting anti-meningococcal antibody responses, and it is expressed across all meningococcal serogroups. A claimed injectable immunogenic composition comprises capsular saccharides from at least 2 of serogroups A, C, W135 and Y of N. meningitidis, where the capsular saccharides are conjugated to carrier protein(s) and/or are oligosaccharides. The composition may further comprise an antigen from one or more of serogroup B N. meningitidis, Haemophilus influenzae type B, and/or Streptococcus pneumoniae. The serogroup B antigen is a NADa protein in oligomeric form, a 741 protein, a 936 protein, a 953 protein or a 287 protein. The immunogenic composition is useful in the manufacture of an injectable medicament for the prevention and/or treatment of bacterial meningitis (claimed). Preferred 741 protein fragments for use in the compositions lack one or more amino acids from the C-terminus and/or N-terminus of the present sequence, or comprise an epitope of the polypeptide, or an allelic variant, homologue, mutant, etc. for maximum cross-strain efficacy, preferred compositions include more than one variant of protein 741 ADR23260-ADR23262.

XX Method for simultaneous heterologous expression of two or more Neisserial
PT proteins, useful in producing antibodies with significant bactericidal
PT efficacy, involves fusing two or more Neisserial proteins.
XX
XX Example 4; Page 19; 54pp; English.
XX
XX The invention relates to a method (M1) for simultaneous heterologous
CC expression of two or more Neisserial proteins, involving fusing two or
CC more Neisserial proteins (chosen from chosen from orf1, orf4, orf25,
CC orf40, orf46, orf83, 233, 287, 292L, 564, 687, 741, 907, 919, 953, 961
CC and 983) including domain deletion variants (e.g. N-terminal deletions
CC where all N-terminal amino acids up to and including the poly-Gly region
CC are deleted, termed deltaG). Also included are a protein expressed by
CC (M1) and a hybrid protein (P1) of formula NH2-A-B-COOH, where A and B are
CC different Neisserial proteins. (M1) is useful for simultaneous
CC heterologous expression of two or more Neisserial proteins and for
CC producing hybrid Neisserial proteins. The hybrid proteins produced by
CC (M1) enable production of antibodies with significant bactericidal
CC efficacy. The present sequence is a deltaG mutant Neisserial protein
CC suitable for use in the hybrid constructs.

 An aqueous immunogenic composition for immunizing against bacterial meningitis comprises conjugated capsular saccharides from meningococcal serogroups C, W135, Y, B and A.  
 Disclosure; SEQ ID NO 3; 47pp; English.  
 The invention relates to an aqueous immunogenic composition which induces an immune response that is bactericidal against serogroups B, C, W135 and Y of *Neisseria meningitidis*, when administered to a patient. The composition comprises a conjugated serogroup C capsular saccharide antigen, a conjugated serogroup W135 capsular saccharide antigen, a conjugated serogroup Y capsular saccharide antigen, and one or more polypeptide antigens from serogroup B. The conjugated saccharides are oligosaccharides. The saccharides are conjugated to a carrier protein selected from diphtheria toxoid, tetanus toxoid, Haemophilus influenzae protein D and CRM197. The composition or conjugated capsular saccharide antigen is useful as a medicament or in manufacturing a medicament for raising an immune response in a mammal. The composition and method may be used for immunizing against bacterial meningitis. This sequence represents an N. meningitidis 741 polypeptide with a deletion.

PT Composition comprising crossreactive immunogenic antigen encoded by open  
 PT reading frame 2086 of *Neisseria* sp., that provides immunogenicity against  
 PT meningitis, or its immunogenic portion or biological equivalent.

XX Claim 60; SEQ ID NO 186; 480pp; English.

XX This invention relates to a novel composition which comprises at least  
 CC one protein (or fragment of) encoded by an open reading frame (ORF) of a  
 CC *Neisseria* sp. (ORF2086), where the ORF encoding a crossreactive  
 CC immunogenic antigen provides immunogenicity against infection by  
 CC *Neisseria meningitidis* serogroup B in a subject. The composition of the  
 CC invention may have antibacterial or antiinflammatory activity through the  
 CC induction of the immune response. The invention may be useful for the  
 CC treatment of bacterial meningitis in a mammal. One or more polypeptides  
 CC or nucleic acids encoding such polypeptides are useful in a composition  
 CC or as a part of the treatment regimen for the prevention of amelioration  
 CC of *Streptococcus pneumoniae* infection. The composition of the invention  
 CC is non-pathogenic and substantially free from any infectious impurities.  
 CC The immunogenic compositions can be compounded with fewer components to  
 CC elicit protection comparable to previously used agents. The present  
 CC sequence is the amino acid sequence of a *Neisseria meningitidis* strain-  
 CC specific mature 2086 protein which can be used to create the composition  
 CC of the invention.

 PT in mammal, comprising multiple variant of meningococcal protein NMB1870,  
 PT as antigen.  
 XX  
 PS Claim 11; SEQ ID NO 139; 77pp; English.  
 XX  
 CC The present invention relates to composition (I) comprising at least two  
 CC multiple variants of meningococcal protein NMB1870 (ADP70202-ADP70246,  
 CC ADP70278, ADP70280-ADP70286, ADP70288-ADP70295, ADP70324-ADP70343) as  
 CC antigen. (i) elicit a bactericidal response effective against each of  
 CC serogroup B *Neisseria* meningitidis strains MCS8, 961-5945 and M1239, and  
 CC also elicit an antibody response which is bactericidal against N.  
 CC meningitidis strains in at least 2 of hypervirulent lineages ET-37, ET-5,  
 CC cluster A4, lineage 3, subgroup I, subgroup III, and subgroup IV-1. In  
 CC NMB1870 is a lipoprotein. In (i) at least one of the proteins does not  
 CC include the amino acid sequence ADP70271 or ADP70272 within 10 amino

CC acids of its N-terminus or at least one of the proteins does not include  
 CC the amino acid sequences ADP70273 within 10 amino acids of its N-terminus  
 CC or at least one of the proteins includes the amino acid sequence  
 CC ADP70274. ADP70271-ADP70274 are sequence motifs for retention or omission  
 CC from the NMB1870 proteins. (I) or (II) is efficiently elicits systemic  
 CC and/or mucosal immunity and thereby prevents/treat meningitis and  
 CC bacteraemia. (I) is useful as medicament and for raising an antibody  
 CC response in a mammal for protecting a mammal against a Neisserial  
 CC infection.

Zlotnick GW, Fletcher LD, Farley J, Bernfield LA, Zagursky RJ;  
 Metcalf BJ;

WPI; 2003-663416/62.

N-PSDB; ADE44645.

Composition comprising crossreactive immunogenic antigen encoded by open  
 reading frame 2086 of Neisseria sp., that provides immunogenicity against  
 meningitis, or its immunogenic portion or biological equivalent.

Claim 60; SEQ ID NO 80; 480pp; English.

This invention relates to a novel composition which comprises at least  
 one protein (or fragment of) encoded by an open reading frame (ORF) of a  
 Neisseria sp. (ORF2086), where the ORF encoding a crossreactive  
 immunogenic antigen provides immunogenicity against infection by  
 Neisseria meningitidis serogroup B in a subject. The composition of the  
 invention may have antibacterial or antiinflammatory activity through the  
 induction of the immune response. The invention may be useful for the  
 treatment of bacterial meningitis in a mammal. One or more polypeptides  
 or nucleic acids encoding such polypeptides are useful in a composition  
 or as a part of the treatment regimen for the prevention of amelioration  
 of Streptococcus pneumoniae infection. The composition of the invention  
 is non-pathogenic and substantially free from any infectious impurities.  
 The immunogenic compositions can be compounded with fewer components to  
 elicit protection comparable to previously used agents. The present  
 sequence is the amino acid sequence of a Neisseria meningitidis strain-  
 specific mature 2086 protein with a native leader sequence which can be  
 used to create the composition of the invention.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

; FILE REFERENCE: 38-21 (52176) A
; CURRENT FILING DATE: 2003-01-03
; NUMBER OF SEQ ID NOS: 58
; SOFTWARE: PatentIn version 3.1
; SEQ ID NO 6
; LENGTH: 471
; TYPE: PRT
; ORGANISM: Prochlorococcus marinus
; NAME/KEY: PEPTIDE
; LOCATION: (1) - (471)
; OTHER INFORMATION:
US-10-336-263A-6

Query Match      50.7%; Score 36; DB 9; Length 471;
Best Local Similarity 54.5%; Pred. No. 1.5e+02;
Matches 6; Conservative 3; Mismatches 2; Indels 0; Gaps 0;
